Endometriosis AI Analysis Report

Advanced Multi-Modal Federated Prediction

1. Patient Clinical Metrics

Age	BMI	Pelvic Pain	Dysmenorrhea
45	27.6	7/10	6/10

Dyspareunia	Family Hist.	CA-125	Estradiol
No	Yes	61.0 U/mL	198.0 pg/mL

Progest.
5.5 ng/mL

2. AI Diagnostic Prognosis

Confidence Score: 0.0% (+/- 4.0%)

Estimated Stage: Stage II (Mild)

Future Risk Trajectory (Years 1, 3, 5):
1-Year: 43.9%, 3-Year: 54.5%, 5-Year: 47.2%

Generative Clinical Synthesis:

DISCLAIMER: AI research tool not a clinical diagnosis.

Primary Assessment: 0.0% (+/-4.0%) probability of active endometriosis. Estimated classification: Stage II (Mild).

Neural Routing: 54.8% of computation routed to the Adenomyosis/Uterine Expert Sub-Network.

Biomarker Highlights:
- CA-125: 61.0 U/mL elevated (threshold 35 U/mL). Differential diagnosis required.
- Pelvic Pain Score 7/10 indicates significant nociceptive involvement.

Recommendation: High-resolution transvaginal ultrasound and pelvic MRI for structural assessment.

Personal Actionable Plan:

Personal Actionable Health Plan (AI-generated for educational purposes only):

1. Monitoring: Risk profile is stable. Maintain routine gynaecological checkups.
2. Pain Management: Pain score is elevated discuss NSAIDs or pelvic floor physiotherapy.
3. Hormonal Balance: Omega-3-rich anti-inflammatory diet may help regulate excess oestrogen.
4. Lifestyle: An anti-inflammatory diet (Mediterranean) can reduce systemic inflammation markers.

Advanced Multi-Modal Federated Prediction

3. Physics-Informed Digital Twin (3D Render)

High-resolution rendering of the generated patient organ geometry, mapping lesions, endometriomas, and simulated adhesions based on the PINN predictions.
