Endometriosis AI Analysis Report

Advanced Multi-Modal Federated Prediction

1. Patient Clinical Metrics

Age	BMI	Pelvic Pain	Dysmenorrhea
30	23.5	5/10	5/10

Dyspareunia	Family Hist.	CA-125	Estradiol
No	No	32.0 U/mL	165.0 pg/mL

Progest.
9.5 ng/mL

2. AI Diagnostic Prognosis

Confidence Score: 0.0% (+/- 4.0%)

Estimated Stage: Stage II (Mild)

Future Risk Trajectory (Years 1, 3, 5):
1-Year: 44.2%, 3-Year: 55.2%, 5-Year: 47.2%

Generative Clinical Synthesis:

DISCLAIMER: AI research tool not a clinical diagnosis.

Primary Assessment: 0.0% (+/-4.0%) probability of active endometriosis. Estimated classification: Stage II (Mild).

Neural Routing: 60.3% of computation routed to the Adenomyosis/Uterine Expert Sub-Network.

Biomarker Highlights:

Recommendation: High-resolution transvaginal ultrasound and pelvic MRI for structural assessment.

Advanced Multi-Modal Federated Prediction

Personal Actionable Plan:

Personal Actionable Health Plan (AI-generated for educational purposes only):

1. Monitoring: Risk profile is stable. Maintain routine gynaecological checkups.
3. Hormonal Balance: Omega-3-rich anti-inflammatory diet may help regulate excess oestrogen.

Endometriosis AI Analysis Report

Advanced Multi-Modal Federated Prediction

3. Physics-Informed Digital Twin (3D Render)

High-resolution rendering of the generated patient organ geometry, mapping lesions, endometriomas, and simulated adhesions based on the PINN predictions.

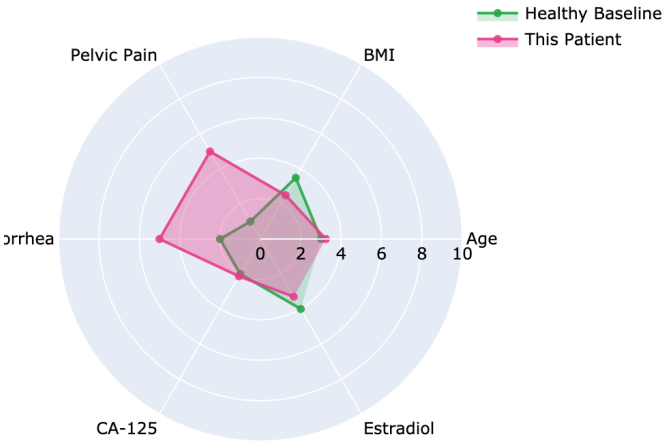
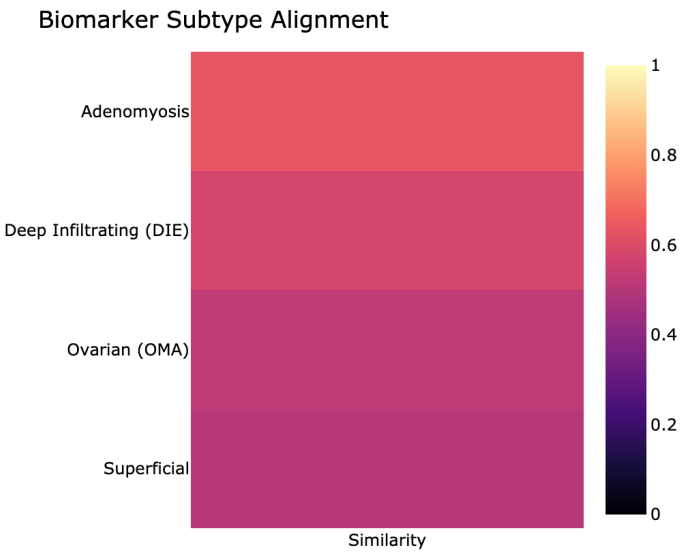
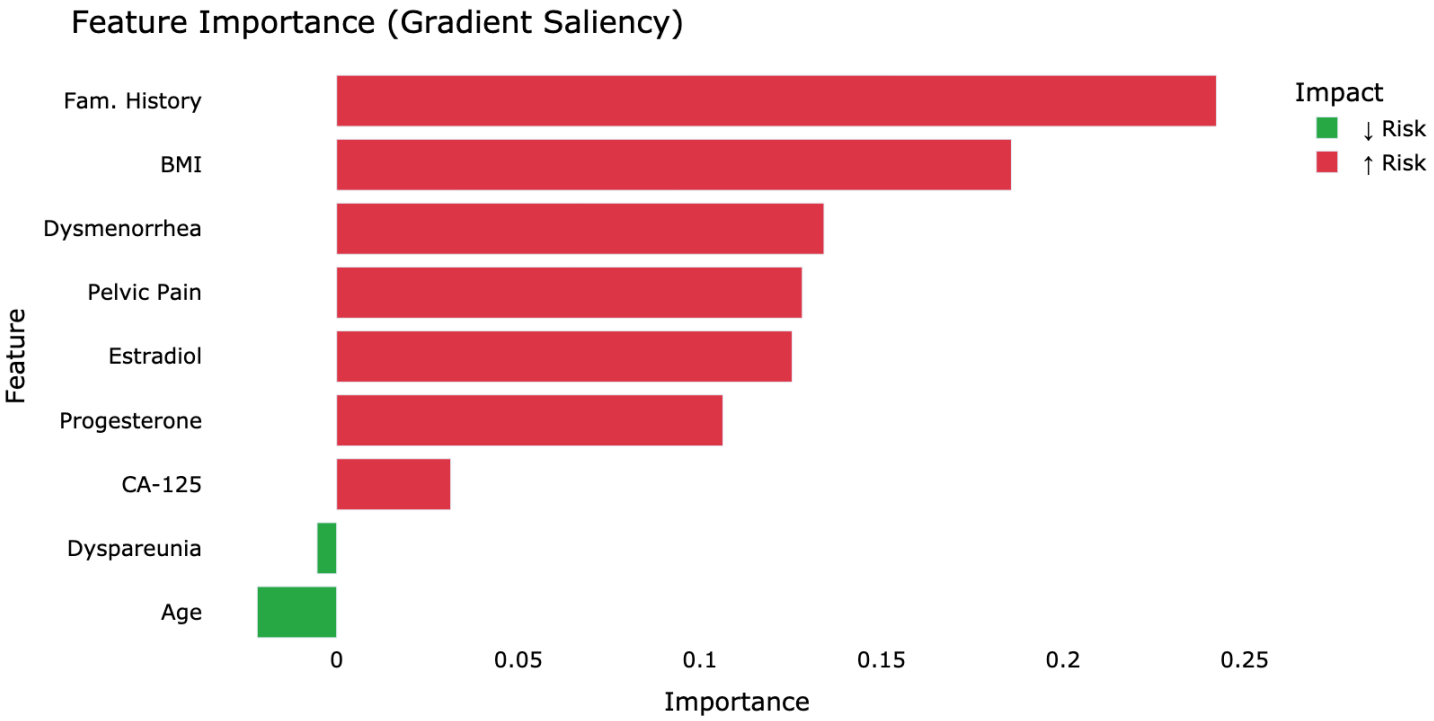
Advanced Multi-Modal Federated Prediction

4. Advanced Analytics & Explainable AI





Feature Importance (SHAP/XAI Explainer):



XAI Insight: Risk score 0.0%. Primary drivers: BMI (23.5), Fam. History (0.0).
